

Bundle File Tool – Update Memo

To: Bundle File Tool Development Team

From: John (Developer)

Subject: Feature Enhancements – Header Control & UI Resizing

Summary of Updates

The following updates were implemented to address Ringo's directive for improvements to the Bundle File Tool. All changes were performed with the strict priority of preserving existing functionality and layout behavior.

Implemented Changes:

- ■ Setup window resized from 500x400 → 500x500 to better accommodate content.
- ■ New config option 'add_headers' added to bundle_config.json (default: True).
- ■■ Setup screen now includes a checkbox labeled 'Include Headers in Output Files'.
- ■ File saving logic updated to prepend headers from the bundle if enabled.
- ■■ Info panel now includes 'Headers Included' label, dynamically refreshed.

Conformance Notes

All UI fields, buttons, menus, and configuration settings were preserved. Code changes were modular and documented. Behavior was tested against expected logic paths using default settings and modified configurations.

Next Steps

The updated script is named 'bundle_file_tool_UPDATED.py'. Please review the changes in staging and validate with multiple bundle files before production release. Feedback welcome.
